

TUNDRA LATE

Orchardgrass

Profile

Highly digestible variety offers excellent protein content, and unmatched palatability for healthier livestock. This late winter hardy variety provides farmers and ranchers more productive grazing and haying later into the season. Ideal for hay, grazing or silage.

- Exceptional orchardgrass that demonstrates above average winterhardiness
- Moderate drought and flooding tolerance
- Selected for high quality (leafy)

Suitability

Maturity	late

Adaptation

Root habit	Bunch grass
Leaves	Basal
Drought tolerance	Moderate
Salinity tolerance	Low
Seeds/Lb.	425,000
Preferred soil	Medium, well drained
