

NS BRAND

Sorghum Sudangrass

Profile

NS Brand is a high yielding conventional forage grass best used for hay, grazing, greenchop, or cover crop. Thin sweet stems make it highly palatable with stem sugar ranging from 12-16%. Planting higher populations will result in finer stems, finer stems dry quicker producing higher quality hay. The improved drought tolerant genetics allow NS Brand sorghum sudangrass to yield even under dry conditions. Recovery following a drought is excellent, but always test the forage for prussic acid prior to feeding to any animal.

- Excellent early season vigor
- Good late season cover crop
- Low water requirements
