

NS DRYSTALK BRAND BMR

Sorghum Sudangrass

Profile

NS Drystalk Brand BMR is a summer annual forage grass that yields. Two key benefits of this hybrid are increased digestibility and improved dry down with the dry stalk trait. Dry stalk hybrids have (3-4%) lower moisture in the vegetative stage and (8-10%) lower moisture in the mature stage. Provides high quality feed for grazing, balage, hay, and silage. We recommend harvest in the boot stage in ortder to get the best nutritional value, yeild and regrowth.

- Highly palatable and digestible
- High yield potential
- Low water requirements
