

COURTENAY

Tall fescue

Profile

Courtenay tall fescue is an excellent choice for wet soils or fields with periods of flooding. Suited both for soils with high water tables or well drained soils.

With its deep root system, Courtenay tall fescue is a wetland grass that produces well during dry periods. Courtenay tall fescue is a bunchgrass with large basal leaves (like meadow brome). Basal leaves are low on the plant making an excellent leafy pasture or hay.

Courtenay tall fescue is a vigorous perennial bunchgrass that competes very well with other grasses or alfalfas in mixtures.

- Good flood and saline tolerance
- Large basal leaves, high quality
- Exceptional yield potential

Other features

Endopyhte free	Yes
Establishment	Vigorous
Period of production	Late spring to late fall
Regrowth	Rapid
Quality	Very good
Hardiness	Extremely winterhardy tall fescue variety

Other features

Hay	✓
Pasture	✓
Saline Tolerance	Produces well in light to moderate saline soils
Flood Tolerance	Very good
Drought Tolerance	Good
